Web Design Lessons 8-10

Lesson 8 – Add a graphic image/logo:

1. Make sure your logo file is in your website folder. The same folder your Web page document is in. Below the <body> tag insert the following code:

> <body style="color: rgb(139,62,47); background: rgb(150,205,205); font-family: georgia"/>
> <p style="text-align: center"><img src="logo.jpg"></p>
> <hr style="color: black; height: 3; clear: right"/>

2. Save and view your changes.   Resave to your backup homebu.txt.

Lesson 9 – Add a background image:

1. Go to *www.grsites.com* and select a background image. Save it to your website folder.
2. Edit your body tag to look like the following (remove the "background rbg(##,##,##)" and replace with background-image: url(filename.jpg):

> <body style="color: rgb(139,62,47); background-image: url(filename.jpg); font-family: georgia"/>

3. Save and view your changes. Resave to your backup homebu.txt.

Lesson 10 – Create links between documents:

1. You begin by inserting links in the home page to your other two pages. To link to a page, you specify the name of the file using the href attribute of the <a> tag. For example, to link the phrase "Contact Me" to the contacts.html file, you enter the following HTML code:

> Contact Me &#183;

Follow this example and list three links just above your horizontal line.

> <p style="text-align: center">
> Home &#183;
> AboutMe &#183;
> Services &#183
> </p>

2. Save and view your changes. Resave to your backup homebu.txt.
